AMERICAN BEACHGRASS Retail ORDER FORM - OUTSIDE MI orders
 (Beachgrass is Available in Spring April - June and Fall September - November)

Name _____ Phone _____

Address _____

City _____ State _____ Zip _____

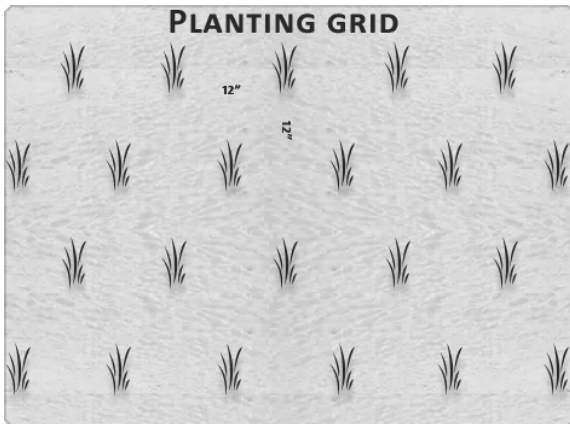

Pick Up Date _____ (Please allow two weeks for processing orders.)

Shipping Date _____ Email address _____

Shipping – All plants are shipped United Parcel Services. If you prefer the American Beachgrass be shipped, it is best to ship early in the week, so that plants are received no later than Friday.

Shipping Charges if applicable: \$50.00 per box (box can hold from 1-3 bundles)

Shipping charges are for orders delivered outside of Michigan

No. of 500 culm Bundles* ordered _____ x \$70.00 bundle \$ _____

No. of 100 culm Bundles* ordered _____ x \$18.00 bundle \$ _____

Shipping Charges \$50.00 per box \$ _____

We require a minimum 50% deposit with the order, with the reminder due at the time the order is received.

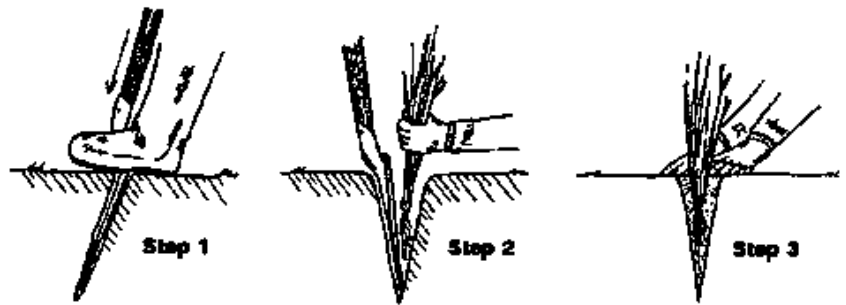

Total Due \$ _____

Payment \$ _____

Balance \$ _____

Tips for a successful planting:

- 1) Set up planting grid with stakes on each row end; tie with strings crossing the planting area to make a grid
- 2) Moisten sand with sprinkler to mimic a soaking rain – this will keep the holes from backfilling
- 3) Keep plant roots covered from wind/sun drying while conducting your planting –this has proven to be the greatest determining factor on plant survival!
- 4) Open a small hole using a tool: spade shovel, tree planting bar or hand trowel –use heel to dig! (See image to right)
- 5) Insert 2 culms, using tool to keep sand from falling into hole. Fill sand around base of plants.
- 6) Compact soil around plant by tamping with foot or place tool in the ground 2-3 inches away, pull handle away from plants to compact soil toward plant -air gaps in the planting hole lower survival rates.

***Bundle Information**

Beachgrass comes in bundles of approximately 500 culms (stems). Each culm will have at least 1 – 3 leaves. Culms may be growing in clumps of anywhere from 1 to 8. We keep them clumped together to preserve moisture; upon planting, keep them together for a more natural look, or pull them apart into individual culms to achieve the following coverage. Recommended spacing of 24”x24” for level, stable areas, 18”x18” for some slope or erosive areas and 12” x 12” for steep slopes or highly erosive areas. For better survival and sand collection, place 2-3 culms to each hole: **500 culms will cover a b o u t 250ft² at 12” spacing with 2 culms per hole.**
